(:00).

K-

You decide you are the captain. You want to see if you have a cancer, if something can be done with it. You want to learn maybe to bring something to your body that you don't need to eat again. You want to go to LA to see your sister, or .. you want to go and see your father who died 20 years ago. But you have to be sincere.

T.. (:02).

We want you to come in, each system has 2 seats ...

see who sits on the captain chair decides we go and see uncle in NY ...

.. if she wants to go somewhere else to Paris.

We want to see if both of you can go where you want.

(:04).

K- There are no walls, not the white eggs you see, it's an open space .

We want to know if in one system you go to LA to sister, you have .. a diner, she gives you a bottle of wine. You can come back through the machine to Linz. We want to see if you can (bring that bottle of wine) you took from your sister in LA in your hand when you arrive back in Linz. (:06).

Come back with a bottle of wine.

If you go to your father who died 20 years ago , and have a bottle of wine with him, but you can't bring the bottle wine back, because that's an energy system .

(:08).

It's a totally different science, T, and we want to understand this. You captain the ship yourself you ..

We are inviting you as Italians .. to add to the totality of the memory of this system, structure of flight ..

(:10).

We want some of you who want to go to the moon, study where on the moon you want to go, and see when you go into the FEU see if you get to where you want to go .. then if you bring a sand or stone from the moon, bring it back with you that we can test it. We can see , this new T allows you, such a T&T .. (:12).

You can't ask I want to go to a bank and come back with a million, it won't happen. .. but we want to see how the T is going to take shape. We'll do this for 3 or 4 months, we need a certain number of information that then we , already mass produce, We are producing 3 to 4 of these machines a month at the moment. It's going to be a normal systems for everyone.

We want you for example, ... you can go to Milan get your pizza and come back. We want to test the limitation, can it be done, did we do it correctly. (:14). That's the whole aim of it.

... Now we want to develop this T , that you can go to Washington and sit with president Biden in the WH. He doesn't know where you came from, you talk to him, come back .. maybe he gives you a gift to bring back with you.

We want to travel the way the U does, not to get in the car and burn the fuel and the rest of it.

(:16). There is no limitation in the new system developed. It's nothing which you have seen before,. It's not a dynamic system. We kept this T very secret, we developed it. and now we want the KS to test it and see what we need to do ...

You keep one of these at home, you are hungry you go to the best restaurant on the other side of the world and you come back, you are sick you see what you can do with it.. You go to the Moon, walk bring a stone back

We want to bring a new D in man's T&T . .the old ways are over.

(:18).

(:20).

Q: What could happen bad to the physical body, or what can happen to physical body, entering this machine?

K- Nothing bad can happen in these machines, that's for sure. You are used to traveling in an object like a car, to be happy you are traveling. We don't see meteorites getting in car and coming to earth. We don't see other objects in U using a vehicle to travel ...

(:22).

Q: are the trips preset?

K- You decide, where you want to go what you expect from it.

Q: Intention make a big role on this trip?

K- Intention is a direction. (You want to go) to a restaurant you get in the car. Now with this T you don't need a car you still go to a restaurant.

Many times flown so many hours to get from Ghana to china... now instantaneous .. (:24).

We use the P to transport. Now we use the plasma to transport which is no dimension. WE have the knowledge to do it ...

Before you enter the flight room you go through 3 sets of systems, to prepare your P, STP, and STM, before you go into the system. When you are in the system, you are in the plasma state. You are in a very open space.. . it's setup , then you decide what you want to do ... what to do I have a cancer how can I change it with the fields which are available in the system. We don't have a doctor to tell you we heal. In space there are no doctors .

Maybe you are hungry you want a banana, you satisfy that emotion that the body receives the energy. (:26). Maybe the banana is in 2 stars, 10 planets or another galaxy. This is the breakthrough in the science.

(:28).

Q: hip replacement ...

K- hip implants plates heart valves cannot go in . (:30).

Any electronic implants at the moment till we understand more ..

Q: If you got mental problems

K- We don't know, you have to go in there and see what you find out about yourself.

Q: . if I want to go to S Pole ..

(:32). how do I come back.

K- You started, you have a reference point of return. It's a machine. It's where you started from , you always come back to the point.

Q: I am traveling with my body?

K- That's what we are trying to establish, yes. You have to understand the T, the knowledge. We transmute your energy plasma, what you call the soul, and your soul manifests itself in the shape of the body in that other side. You decide what shape you want to be. If you listen to the American teaching we were explaining about system. We brought many KS from around the world to test the system. We never informed anybody. (:34). We never tell who comes and who goes with us. .. Jon Bliven. we he tested the first series of these machine he came out and told on Sunday what he felt, how is connected even after he left Austria.

Q: .. when I am traveling my body is dematerializing .. and materializing at the destination, I decide if I want to be tall, or fat ... blond blue is correct.

K- Yes. If you want to change the color of your eye when you get there, you can. (:36).

Q: is it possible when I arrive at N Pole I become a bear because it can resist cold

K- Why not, if you want to be a bear, I can't control it.

(:38).

Q: .. Once you go into machine do you learn those things for good?

K- This is something we want to know as well. That's why we put you through the system.

Q: .. say I would like to go to Mars, (:40). I will ask to materialize in place is it correct.

K-Yes, you don't need to take a suit with you to go to Mars.

We are bringing a totally new S&T, but we are using the Pl T which we have taught you. It's no use spending time cleaning up the CO2 and all the mess. If we can produce and deliver these systems that you can go to NY to work and come back, you don't need to take a car. In 10 years time there is no CO2 problem, there are no cars on the street.

(:42).

Q: .. if someone got relatives who are disabled, could they go in the machine and come back ..

K- Yes you can take 2 people brother sister a dog. WE are trying to understand the limitation of the machine (:44). you do not need an instrument to travel anymore. A donkey , aircraft .. to introduce a new way of living .. D of existence.

Q: The government will allow you to do this?

K- we are doing it. This is a breakthrough in science, governments cannot stop a breakthrough in science. It's a knowledge gained, is a peaceful, applicable T for everyone. (:46).

Thank you very much. please make your way to Linz

Q: if we just want to improve our health with no intention to travel is it ok to come

K- Yes we want you to. We do not want to make this a medical system. It's a flight S but when you go into space you body has to be in perfect condition . (:48).

Q: .. this machine is for elevation of the soul .. the soul can elevate as much as it can contain, is it correct ?

K- Yes. (:50).

Q: can a mother go into machine with disabled daughter.

K- Yes

(:52). Q: He can go to visit people who passed away, is it correct?

K- You visit people in your dream. Now you can do it, control it, you don't have to wait if I am going to dream about mother tomorrow ... you do it in this T. You control what the reality you want to see, the energy extraction what you call, dream. Now the T has developed that part that we can do it.

Q: If you can go to see people who are already passed away that means they are here with us all the time?

K- No, they are here in the U, not here with you.

Let me explain .. (:54) . when the mother was alive you went to her to have dinner and sit and talk with .. When the mother died you had no control you might see the mother in your dream tonight , next week or next year. Now you have that D of control, as you saw that mother at home, now you can see, interact with the mother in the energy level. Because now you have that access we understand the way you used to dream , you don't need to wait to dream about the mother, now you can control it, that you interact with the mother, because she exists as an energy, as a field, as an existence somewhere, it's not just in your head.

That's why we built 2 systems. 1 for physical and 1 for energies .. or plasma. (:56). The T is so advanced we can't even tell you what we can do with these machines. You want ?? chose now it's independent , you try it.
You come independently to try it.

When people come off the machines and tell you what they have seen and done we accept it. Because that's why build it for them to do it.

Thank you .. go on the KF and book yourself we need understanding of the Italians too ..

(:58).

People are coming with rucksacks to sleep outside to get in they have written to us just to come in , book in , test it , their dream for years to be able to do this ..

Q: Has anyone tested the machine

K- Yes go to American teaching of Sunday Jon Bliven ... tested it we flew him in from US to go through a number of systems .

END
